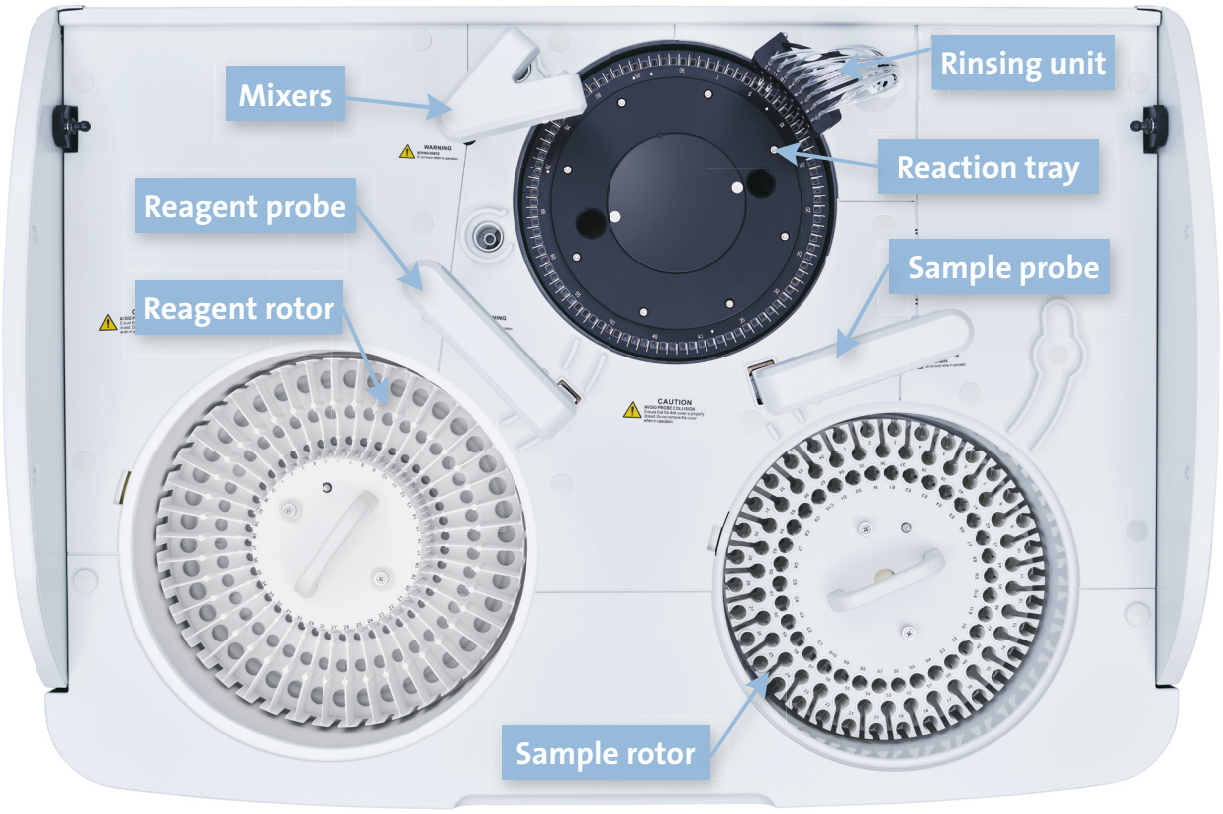
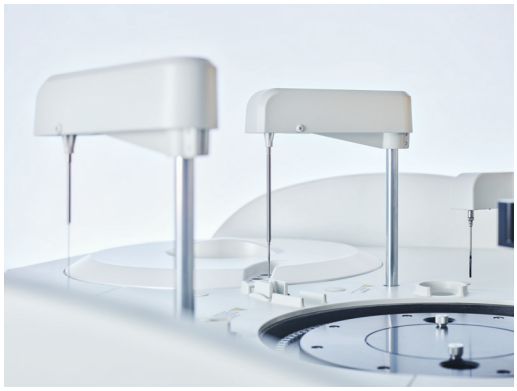
respons®420c at a glance

Experience laboratory work redefined. respons®420c is a fully automated random access analyzer designed to deliver reliable results with a constant throughput of up to 420 tests per hour (620 tests/hour incl. ISE). Due to its optimal cost-effectiveness and ease of use, it perfectly fits in small to medium sized laboratories.



Reaction system

- Grated photometer with 12 wavelengths for a maintenance free operation
- Wide photometric linearity up to 3.5 OD to minimize the need of reruns
- Maintenance free thermostatization of cuvettes by contact heating (metal block)
- Twin test functionality for DiaSys HbA1c net FS



Reagent rotor

- On board capacity of up to 40 DiaSys respons® reagent bottles
- Refrigerated reagent rotor (2-8°C)
- Convenient one grip loading of respons® bottles also for two component reagents to eliminate the risk of misplacements
- Barcoded bottles – automatic connection to pre-programmed applications

Sample rotor

- 102 positions in total
  - 68 positions (outer rings) with auto-barcode reading
  - 34 positions (inner ring) for calibrators (10 positions), controls (9 positions) and STAT (11 positions), 4 positions for cleaner
- Hosting all major primary tubes and sample cups
- Processing STAT samples with highest priority
- Auto dilution and automatic adaption of measuring window in case of substrate depletion to reduce manual work, rerun costs and turn around time

Advanced HbA1c testing

- Fully automated on board hemolyzation of whole blood samples to eliminate time consuming and error prone manual steps
- HbA1c smart sampling
  - Sampling at bottom of tube for a sufficient aspiration of erythrocytes for HbA1c determination
  - Deep washing of sample probe to minimize carry over after whole blood sampling
